To evaluate the energy effects of wonder save on petrol with Biofield Viewer imaging.

INTRODUCTION:

Biofield Viewer

The Biofield Viewer device is a light analysis technology that is non invasive. It requires that area be exposed to a full spectrum controlled lighting environment and the absorption and reflection intensities are color coded and then analyzed. We often refer to congestion and less energy area when analyzing these images. The software has a chromatology Programmed. The different colours that are seen help in interpretation of the energy status of that particular area being scanned. Green relates with positive frequencies of healing. Blue, Golden yellow and Violet frequencies are associated with higher cosmic vibrations. Pink in the energy field are calming frequencies. Red, grey and orange are lower frequencies and congested pools of these are related to imbalances on energy levels.

METHODOLOGY:

The camera was set on a certain focus throughout the study.

Scans were taken on following steps:

1. Base line scan/Before scan was taken before using wonder save in petrol.
2. The after scans were taken after using wonder save for two hours in one litre petrol.
3. Petrol was kept in one litre glass bottle.

Observation: for Petrol

Biofield Viewer

Analysis: General biofield of the bottle with petrol after using wonder Save has become brighter and vibrant. After using wonder Save, biofield of the petrol shows increased in the higher energy blue colour band.

Conclusion:

Wonder Save shows a positive effect on the energy level of the petrol measured by biofield viewer imagining.

Sample size is too small, further large study is required for conclusion.

Disclaimer:

The interpretation of the BV (Biofield Viewer) has to be done by certified BV analyst who is a licensed medical practitioner. The BV system does not replace any existing medical examination and is not intended to be used for medical diagnosis, therapy or treatment of diseases. Results are seen and interpreted at an energy level only.
